

Vivos Therapeutics is excited to introduce
MyoCorrect by Vivos.

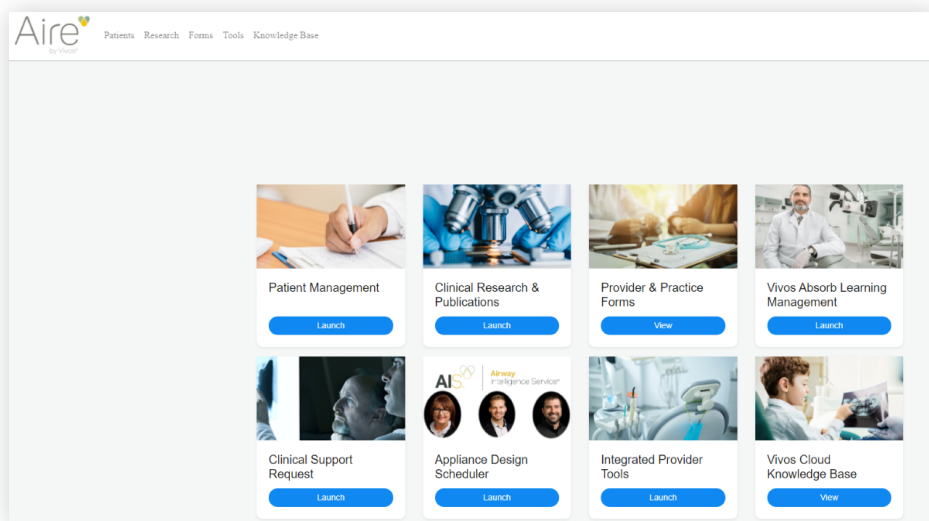

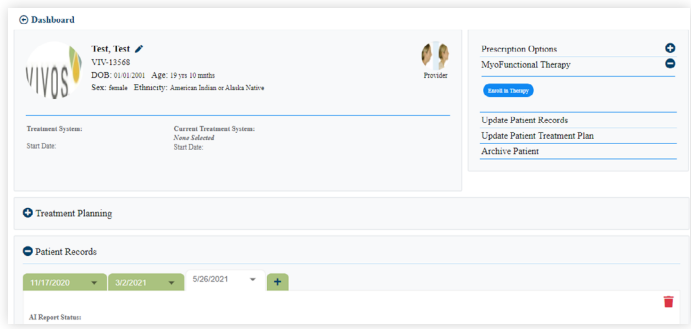

With just one click, you now can offer your patients myofunctional therapy via telemedicine technology.

MyoCorrect is an exercise-based program that consists of a full, comprehensive evaluation and a series of 20- to 30- minute, 1-on-1 myofunctional therapy sessions within an eight- to 12-month period with your patients. The Vivos orofacial myofunctional therapist (OMT) has been fully trained in the Vivos treatment system and protocols for both children and adults, in addition to a comprehensive training program in myofunctional therapy, Buteyko breathing, etc. With this background and deep understanding of the treatment objectives that Vivos Providers wish to achieve with their patients, MyoCorrect OMTs act as an extension to Vivos Providers to help complement and support their patients' treatment program.

How to Enroll Your Vivos Patient into MyoCorrect by Vivos

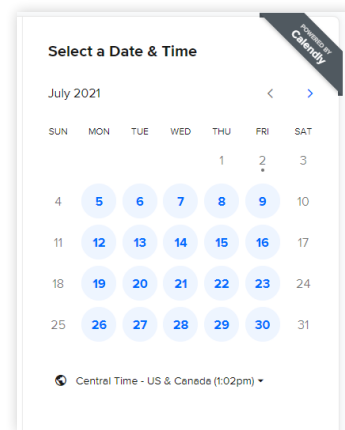

If your patient does not exist in Vivos, create a new patient in VivosAire as you normally would for a traditional Vivos patient. All record requirements still apply, even if you wish to only enroll the patient into MyoCorrect by Vivos and not Vivos Appliance therapy at this time.

Once the patient has been created, open the patient's profile. In the upper right-hand corner of the patient's profile page, under "Prescription Options," where you would normally order an appliance, you will see a new option for "Myofunctional Therapy." Click on the "Myofunctional Therapy" button and follow the instructions to enroll your patient into MyoCorrect by Vivos.

Once enrolled, an email confirmation will be sent to the treating provider with a link to schedule the patient with the Vivos OMT for their first evaluation. We recommend doing this together with the patient in the practice before they leave.

Once scheduled, the treating Vivos provider and patient will be provided with a calendar invite for their appointment date with the Vivos OMT. In the invite, it will have instructions for the call with a link to Zoom. Prior to the call, automatic email and text reminders will go out in advance to the patient with the same information.

Please send the patient home that day with a MyoCorrect Therapeutic Tool Kit. The Vivos OMT will have them start using it right at the first consultation session with the patient.

Once the first appointment is made, we take it from there! (Each session, we will provide and upload notes and information regarding the session right into the patient's profile on VivosAire.)

The MyoCorrect by Vivos program works to help patients neurologically re-educate and strengthen the musculature and respiratory patterns in the orofacial region.

Below are just some of the treatment objectives that MyoCorrect by Vivos addresses either exclusively or in conjunction with other therapies:

- Tongue strengthening, positioning, and function
- Jaw stability
- Jaw muscle strengthening and function
- Lip strengthening, elasticity, function, and rest positioning
- Nasal breathing exercises
- Unblocking the nose
- Head posture correction
- Swallow and chewing correction
- Bad oral habit elimination
- Speech

Included in the MyoCorrect by Vivos Program

- Initial, mid, and final comprehensive myofunctional evaluation
- Sixteen 1-to-1, 20- to 30-minute myofunctional training sessions broken up into three phases
 - Phase 1 – Weekly sessions for the first eight weeks
 - Phase 2 – Sessions every two to three weeks for the following three to four months
 - Phase 3 – One session a month for the remaining three to four months

Orofacial Myofunctional Therapy Programs

- OMT with Vivos Therapeutics Appliance
- OMT with Pre/Post Frenectomy Sessions and Vivos Therapeutics Appliance
- OMT-Only Cases (No Appliance or Pre/Post Frenectomy Session)
- OMT-Only Cases with Pre/Post Frenectomy Session (No Appliance)
