

Treatment Plan Comparison

MyoCorrect is a telemedicine-based interdisciplinary myofunctional therapy program for nearly every one of your Vivos patients that works in conjunction with any Vivos appliance therapy program. MyoCorrect by Vivos offers two different programs for patients, which differ based on the Vivos dental provider's treatment plan. In general, should a patient have a TMD condition, need a frenectomy, and/or have an AHI score of 15 or more, it is recommended that they enroll in the MyoCorrect+ program. Otherwise, it is recommended that most other eligible patients enroll in the standard MyoCorrect program. Here is a comparison of treatment objectives between the two programs:

	 MyoCorrect <small>Therapy Plan</small> 12 Sessions	 MyoCorrect+ <small>Therapy Plan</small> 18 Sessions
Comprehensive Evaluation		
Review medical Hx intake and questionnaires	✓	✓

Establish correct tongue function	✗	✓
Refine the patient's habits and exercises	✗	✓
Focus on diaphragmatic breathing	✗	✓

If MyoCorrect was ordered in advance of or in conjunction with a patient's initial appliance system, then a credit to the initial appliance system will apply. If MyoCorrect is ordered after the initial appliance system, then the retail pricing above applies. If an existing MyoCorrect patient of record at any time needs additional sessions, the provider may purchase a four-session MyoCorrect package for \$399. For more information regarding MyoCorrect, please contact your Practice Advisor. Please find the terms and conditions of the MyoCorrect Therapy Program on VivosAire.
